

Use the personal calendars as a real GroupCalendar. Clear view of appointments, meetings and events of colleagues and team members. Of course with a web interface.

GroupCalendar

PRODUCT INFORMATION

Take a look at Calendar entries of other users or expose your own entries to colleagues.

Simple and easy

The AedifiComm GroupCalendar for Notes transforms the notes calendars in a real group calendar. The easy use of the personal calendar is the same as GroupCalendar for Notes.

Clear view

Secretaries and receptionist have a fast and clear idea of who is where. Management can see the availability of personnel and save lots of time when scheduling a meeting.

Many options and Multilingual

All options in the personal calendar are supported, also for private appointments and pencil in. GroupCalendar is now available in English and Dutch.

On request other languages are available.

No training needed

Knowing the personal calendar is knowing GroupCalendar for Notes.

Availability (web enabled)

Thanks to replication GroupCalendar communicates with other locations. Members on any location are supported and can view their appointments.

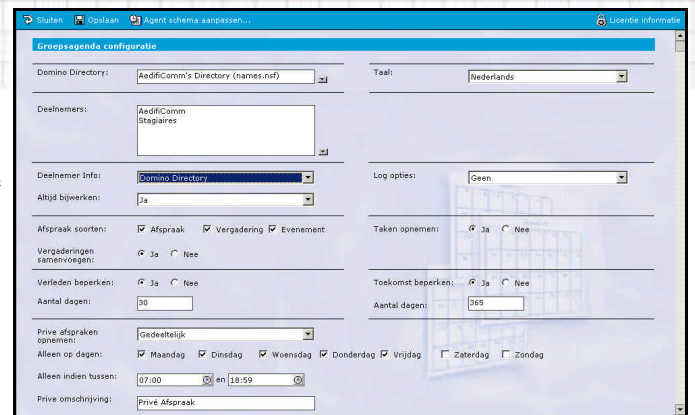

Laptop users, just take the replica with them. The built-in web interface shows the same information in a browser.

Platform independent

Works on any OS that runs Notes and Domino. No additional software on your servers. No extra DLL's or EXE's needed.

Security and Access

Using the option private means "don't collect this information". Access is determined by the administrator (SA), not by the user.

How does it work

- ◆ GroupCalendar collects appointments, meetings, events and even To-do's from the personal calendars of the specified users.
- ◆ GroupCalendar itself is a database for 50 members at a time. Above 50 members the calendar items cannot be presented clearly.
- ◆ So more than one GroupCalendar database can be used.
- ◆ Follow the setup instructions. Register members, teams and departments
- ◆ Select the appointment types you want to collect. Choose appointment, meeting and/or event.
- ◆ To-do's can also be collected
- ◆ In a time frame around the current date, you can collect the items in the background on the server(s).
- ◆ Installation in 5 minutes, administration effort is hardly needed.
